

Presentation Pack

This file tells you exactly what to use for the 20-minute presentation.

The 3 Numbers To Repeat Verbally

Use these three numbers repeatedly because they are the clearest and strongest:

1. 80% Meaning: share of high-priority stops missing shelter. Source: output/tables/evidence_matrix.csv
2. 64% Meaning: share of high-priority stops missing benches. Source: output/tables/evidence_matrix.csv
3. 342 Meaning: ADA-related complaint records in the baseline window. Source: output/tables/evidence_matrix.csv

Best 3 Charts For The Meeting

1. output/figures/top10_risk_stops_bar.png Use for: showing where the most urgent problems are concentrated.
2. output/figures/complaint_totals_by_year_bar.png Use for: showing complaint burden remains elevated.
3. output/figures/jurisdiction_split_top_stops.png Use for: showing why CMTA and City coordination matters.

Slide-By-Slide Pack

Slide 1 - Why This Matters

Use: - No chart required - Supporting file: output/tables/evidence_matrix.csv

Say: - This is a baseline built from public data. - The point is to identify the most urgent stop-level risks and the clearest accountability gaps.

Repeat: - This is a starting point for action, not a final audit.

Slide 2 - What Data Was Used

Use: - No chart required - Supporting source file list from USE_THESE_FIRST.md

Show these source files: - data/canonical/top_25_with_amenities.csv - data/canonical/high_priority_stops_311_analysis.csv
- data/canonical/311_summary_by_responsibility.csv - data/canonical/ada_violation_dataset.csv

Say: - The analysis combines high-priority stop activity, complaint burden, responsibility, and ADA-related records.

Slide 3 - Basic Amenity Gaps

Use: - Main chart: output/figures/top10_risk_stops_bar.png - Supporting table: output/tables/kpi_summary_for_slides.csv

Say: - 80% of high-priority stops are missing shelter. - 64% of high-priority stops are missing benches. - These are not peripheral stops. These are high-service locations.

Repeat: - 80% missing shelter. - 64% missing benches.

Slide 4 - Top-Risk Stops

Use: - Main table: output/tables/top10_high_risk_stops_table.csv - Optional supporting chart: output/figures/top10_risk_stops_bar.png

Show these top 5 stops: 1. 1609 Lavaca/17th (Midblock) 2. Guadalupe/16th Street 3. Lavaca/4th 4. Guadalupe/W. 21st Street 5. UT Dean Keeton Station (NB)

Say: - The risk is concentrated. - That means targeted intervention is possible.

Slide 5 - Safety and ADA Concerns

Use: - Supporting table: output/tables/evidence_matrix.csv - Supporting table: output/tables/kpi_summary_for_slides.csv

Say: - Safety complaints make up 10.65% of complaint volume in the analyzed stop set. - There are 342 ADA-related records in the baseline window.

Repeat: - 342 ADA-related records.

Slide 5a - Public Safety Risk & Liability

Use: - Main chart: output/figures/public_safety_risk.png - Supporting table: output/tables/public_safety_risk_by_stop.csv - Supporting table: output/tables/liability_exposure_summary.csv

Say: - 3 stops are rated CRITICAL liability tier (composite score ≥ 80 of 100). - 30.9 million cumulative rider-exposure-days during the active disrepair period. - 282 open ADA-flagged tickets system-wide; 0 confirmed repairs from either agency. - Guadalupe/16th Street scores 99.4 — near-maximum liability — due to 116 open ADA tickets and 22 zero-day administrative closures.

Repeat: - 0 confirmed repairs. - 30.9 million rider-exposure-days.

Slide 6 - Complaint Burden Over Time

Use: - Main chart: output/figures/complaint_totals_by_year_bar.png - Supporting table: output/tables/yearly_complaint_trends.csv

Say: - Complaint burden remains substantial across full years. - 2026 is year-to-date only and should not be treated as a full-year improvement.

Use these numbers: - 2023: 443 - 2024: 405 - 2025: 461 - 2026 YTD: 118

Slide 7 - Responsibility and Coordination

Use: - Main chart: output/figures/jurisdiction_split_top_stops.png - Supporting table: output/tables/top15_responsibility_table.csv

Say: - CapMetro accounts for 82.62% of summarized issue attribution. - City of Austin accounts for 12.40%. - The issues are not entirely one-agency problems. Coordination is required.

Repeat: - 82.62% CapMetro. - 12.40% City.

Slide 8 - Immediate Actions

Use: - Supporting file: reports/CMTA_20_Minute_Presentation_Pressing_Concerns.md
- Supporting file: reports/CMTA_20_Minute_Presenter_Cheat_Sheet.md

Say: 1. Prioritize the top 10 risk stops. 2. Create a joint CMTA-City safety and ADA tracker. 3. Publish monthly progress updates.

Slide 9 - What This Baseline Does Not Yet Cover

Use: - No chart required - Supporting file: README.md

Say: - GTFS trip counts are service proxy, not ridership. - 311 data reflects reported issues, not all conditions. - Geospatial district and tract joins are now implemented; output quality still depends on source geometry and coordinate quality.

Slide 9a - Equity by Council District

Use: - Main chart: output/figures/district_report_card.png - Supporting chart: output/figures/equity_by_district.png - Supporting table: output/tables/district_report_card.csv

Say: - All 5 council districts with analyzed stops receive an overall grade of F. - Districts 3 and 4 serve the highest share of non-white residents (61.7% and 73.9%) and have comparable or worse outcomes than District 9. - No district shows evidence of targeted corrective action proportional to complaint burden or demographic need.

Repeat: - All 5 districts: F.

Slide 9b - Tract Density & Gap Convergence

Use: - Main chart (simple): output/figures/stop_tract_density_simple.png - Main chart: output/figures/stop_tract_density_combined.png - Alt scatter: output/figures/stop_tract_density_scatter.png - Supporting table: output/tables/stop_tract_density_linkage.csv

Say: - 1.25M 311 records across 290 Travis County tracts document where demand is highest. - Every one of the 25 high-demand stops sits in a tract rated VERY HIGH or EXTREME density ($\geq 2,000$ reports per 1,000 residents). - The Guadalupe/UT corridor (Tracts 11.01–11.03, 337) reaches 5,975–7,921 reports per 1,000 residents — the highest density in the county. - SEVERE GAP stops exist across the full density spectrum. This is not a reporting gap — it is an agency supply gap.

Repeat: - All 15 SEVERE GAP stops: zero capital plan. All tracts: VERY HIGH or EXTREME density.

Slide 9c - Digital Divide

Use: - Main chart: output/figures/311_digital_divide_by_district.png - Supporting table: output/tables/311_report_density_by_district.csv

Say: - 62.9% of all 311 reports citywide are filed by phone. - District 4 = 65% phone dependency (highest). District 9 = 58% digital (lowest phone dependency). - Phone-dominant districts produce fewer digital data points — so lower 311 counts in Districts 3 and 4 do not mean fewer problems. - The accountability mechanism itself has a structural access gap.

Repeat: - Low digital access = undercounted in the record. District 4's gap is likely worse than data shows.

Slide 10 - Decision Ask

Use: - No chart required - Supporting file: reports/CMTA_20_Minute_Presentation_Pressing_Concerns.md

Ask for: 1. Approval of focused corrective action for top-risk stops. 2. Approval of monthly evidence refresh and reporting. 3. Approval of monthly district and tract density monitoring (including digital access split) in the standing report.

Fastest Build Option

If you are assembling slides quickly, use these files in this order:

1. reports/presentation_versions/CMTA_Board_Ready_Slide_Outline.md
2. PRESENTATION_PACK.md
3. reports/presentation_versions/CMTA_20_Minute_Slide_Layout.md
4. output/figures/top10_risk_stops_bar.png
5. output/figures/complaint_totals_by_year_bar.png
6. output/figures/jurisdiction_split_top_stops.png
7. output/tables/top10_high_risk_stops_table.csv
8. output/tables/kpi_summary_for_slides.csv
9. output/figures/public_safety_risk.png
10. output/figures/district_report_card.png
11. output/figures/stop_tract_density_combined.png
12. output/figures/311_digital_divide_by_district.png
13. output/figures/stop_tract_density_simple.png
14. output/figures/311_annual_volume_by_district_heatmap.png
15. output/figures/311_annual_volume_priority_districts_heatmap.png

If You Only Have 5 Minutes

Use only: - output/figures/top10_risk_stops_bar.png - output/figures/complaint_totals_by_year_bar.png
- output/tables/kpi_summary_for_slides.csv - reports/presentation_versions/CMTA_5_Minute_Executive_Brief.md
